Gallegos Lighting Design

Strobe-brik installation

2003

Gallegos Lighting Design worked with Argosy Casino to develop the lighting experience for the expansion of their facility near Kansas City, Missouri. At night, the experience begins for the approaching guest with a view of a fantasy Mediterranean themed facade. Lighting provides a mythical element to the building.

As part of the palette, Gallegos Lighting Design proposed and had approved by Argosy a kinetic and dramatic sparkle for the building. Utilizing over 800 individually programmable strobe lamps, the building comes alive with a beckoning sparkle.

As conceived by Gallegos Lighting Design, the effect is achieved with over 25 Birket brik-32S systems with a variety of custom mounting solutions.

The Strobe-brik system provides for robust, efficient and extensible DMX control of hundreds of small, outdoor-use strobes. The multi-channel controller conserves space, speeds installation, and simplifies maintenance. The controller detects any unsafe or ground fault conditions, shutting down the affected channel. LED diagnostics monitor strobe status and provide the maximum up-time needed for large, continuous-duty shows.
